

Motivation

Joins Kumar K Program [1-1 Mentoring + Daily Live Training]

Starts Beginner DSA course

Completes 1-1 Mentoring with kumar k

Completes Beginner DSA course (100hrs)

Completes 1-1 mentoring for dev + system design with dev mentor

Starts with full stack dev course (200hr)

Starts Pro DSA plan (850 hr course on Hard DSA + OA + CP)

Completes 115 sessions on Hashing

Completes 100+ FAANG OA + CP problems on Hashing

Completes 50+ sessions of hard level Binary search (OA + CP)

Haters getting jealous due to kumar k student progress

Completes 150+ sessions on Hard level Two pointer / Sliding window / Stack / Queue

Completes 100 sessions of Greedy course (OA + CP)

Completes 50+ sessions of Bit Manipulation

Completes 200 hrs of Math + Heap + Graph + Tree course

Completes Segment Tree + MO Algorithm + PBDs course

Completes LLD + Machine coding + HLD course

Attends 8 months daily live class of kumar k

Uses 24/7 doubt support

Completes Linked In / Resume course

Completes Offcampus Job search training referrals

Completes 150 sessions of DP. covering all DP variations for off.
Completes full 850 hour PRO DSA Plan

Crack dream company

Kumarik student after 8 month - transformation

2) Discipline, Hard-work & Focus

1) ~~Poor~~ God. $\Rightarrow$ Hardwork $\Leftrightarrow$ Result

2) Dopamine - Regulation

Activities which messup with dopamine:

(i) short form content

(ii) Whatsapp status

(iii) toxic & addictive/negative people and patterns

$\Rightarrow$ Success needs sacrifice

$\Rightarrow$ Take good amount of water

$\Rightarrow$ Exercise and walking

3) Time Management and Consistency

Factors $\Rightarrow$ (i) clarity of vision $\rightarrow$ Analyze

(ii) Emotional control

-ve / Sad

Mind

middle way

super-happy state

Time-management $\rightarrow$ Google Calendar
mind decisions

DSA - Coding plan

- (i) Select any one language (C++/Java/Python) and start doing the course: → Baby step → step 0 → step 1 → step 2 → step 3 → step 4 → PRO DSA plan

PRO DSA - PLAN:

Access on 2nd Day of the cohort

- Beginner DSA Plan
- PRO DSA Plan
- Revision strategy
- Please have faith in God + Good Health + Good Mindset

FAANG level Coding Interview

CIE → (i) Good communication

- Listen to the person
- * Always use good variable names
- * Use appropriate functions where needed and write properly structured code.
- * follow indentation
- * ^{explain} Each and every line while writing code

A First explain the solution idea clearly to the interviewer

- * First ask all your doubts, assumptions and requirements
- * Explain the solution
- * Use some example input + output
- * Next come to the coding part

- * Discuss corner cases too
- * Do the dry run if there is time
- * Explain complexities in depth

Coding RoadMap Part 0.

Beginner:

Baby-step

↓
step-0

↓

step-1

↓

step-2

↓

step-3

↓

step 1

↓

PRO

Take notes in google Doc

Do not compare with other people

Coding RoadMap Part 1:-

Goal

RD-PLAN $\Rightarrow$ Hard level DSA + OA + CP

↓
warmup

Interviews - higher.
CPA
OA +

- (i) first do warmup DSA course.
- (ii) follow this brilliant method to increase chances to clear OA + problem solving skills quickly

(iii) Pare to Principle

(iv) 20% of course will give you 80% of result

- Hashing = 80
- Binary search = 50
- DP = 50
- Sliding window / Two Ptr = 50
- Greedy = 50
- Bit Manipulation = 50
- Math = All

3

- Now do the pending 80% in any order
- After 20% is done, start doing the pending 80%
- If you are CP interested, give extra work to yourself → by doing CP as well after 20% is done
- CP = how much time you can holistically devote to it
- Less medium time :- Each week give only 1 contest.

Coding Roadmap Part 2:

Medium - High Time: If 100-500 questions done of the given list → It is a guarantee to become expert on CF, 5th on codechef, 2100+ rating on leetcode

Very high time you have for CP → 100-500 from here enough to reach 6th on codechef + CM on codeforces + 2500+ on leetcode

How much time to give to particular coding question?

Qn → (10-15) min

Peak performance:
→ Try to 12am and 5, 6 or 7am
→ food
→ dopamine, detox

Coding Interview:

- (i) Don't act like a robot, maintain smile. during some moments
- (ii) Never stress much
- (iii) ^{coding with interviewer} Don't be silent, start~~ing~~ asking questions
- (iv) → (a) ^{explanation part} Brute-force
(b) Optimized approach: time and space

Coding:

- * variables should be perfect
- * Use functions wherever required, write in indented manner
- * While writing speak and explain
- * If there is time, dry run the code

Non-Technical:

No. of LinkedIn connections

LinkedIn visibility should be more

LinkedIn applications

Good Resume

LinkedIn Profile

LinkedIn Algo

Clarity & Depth of explanation

Resume Make 2 resumes

- (i) for assign referrals (ii) for direct~~at~~ applying

Development:
